NEW PRODUCTS FOR 2017

BASS BUG

This bizarre looking lure is sure to get a few chuckles from anglers, but when you start fishing with it, you can see this is an extremely well designed lure that actually fits the bill for what many anglers are looking for in a "wake bait" style of crankbait. For casting distance, anglers will find the BASS BUG will cast farther and straighter than any lure in its class. Fast or slow, the Bass Bug will track perfectly every time. Additional features like KVD Elite Triple Grip hook and two super loud rattles make the Salmo BASS BUG a true contender!

For more information and available colours, see page 8.

WAVE

Hunting for predators that are feeding in the shallows sometimes requires very long casts. If this is your target fishing, then Salmo WAVE is the lure for you! This original "swimming jig" was designed in consultation with anglers that fish for sea bass, sea trout and asp and it does exactly what it was designed for. Cast out a Wave and watch amazing side to side flash and an aggressive "flutter-down" swimming action at slow to very fast rates of retrieve. You will be amazed! Wave goodbye to the competition, this exciting new lure concept is set to become another Salmo classic!

For more information and available colours, see page 50.

FREEDIVER SX

Not just any crankbait with the similar parameters can dives easily to 9 m, stay in perfect balance at all speeds and trigger more strikes than the "mega divers" on the market today. The Salmo FREEDIVER 12SDR SX exceeds all expectations with anglers who need to get extremely deep. Designed strong enough for saltwater species, fitted with extra strong split rings and Mustad KVD Dura Steel hooks, two tone rattles and combined with six attractive colors make this lure a true treat for any saltwater angler.

For more information and available colours, see page 84.

PERCH 14 SDR SX

Perch 14SDR is well known from our freshwater offering for many years. The critical shape and balance, has made Perch 14SDR incredible strong action so deadly for large predators. The through wire internal construction and foam body (HDSF) make it super tough. After being fitted with super strong split rings and corrosion resistant 3X treble hooks, it turned out to be also perfect for saltwater game. Whether is tuna, wahoo, barracuda, giant trevally or kingfish the Perch 14SDR SX will produce!

For more information and available colours, see page 86.

NEW COLOURS FOR 2017

Hornet

GRH - Grashopper

RVC - River Craw

Rattlin' Hornet

BHT - Brown Holographic Trout

SHS - Silver Holographic Shad

Slider

HAPH - Holographic Albino Perch

Slider SX

HDO - Holographic Dorado

HBL - Holo Bleak

HPR - Holographic Psychedelic Roach

Sweeper SX

HBM - Holographic Blue Mackerel

A large fish, likely a bass, is captured mid-jump from a river. The fish is splashing water, and its body is arched. The background consists of a dense forest of trees with green and brown foliage, suggesting an autumn setting. The water is dark and reflects the surrounding environment. In the foreground, there is a patch of tall, dry grasses and green plants along the riverbank.

NEW

BASS BUG

Lure type - crankbait
In the Salmo offer since - 2017
Available sizes - 5,5 cm
Available versions - floating
Available colours - 5
Recommended method of fishing - casting
Recommended for - bass, pike

BLB - Bluebird Bug

GB - Glow Bug

GBG - Green Bug

MBG - May Bug

SNB - Snowball Bug

A “Big Brother” of the little Bug, this lure was originally designed for bass, but it turned out to be deadly on pike too. Just like LIL’BUG, it is a typical “wakebait” – wobbler designed to work on the surface. The lure is provoking fish by creating characteristic surface wake. However our consultations with the American fishing pros helped us to create a lure that is truly unique. A long cast system (SICS), perfect balance and a built in rattle make this lure in to a gem that flies like a rocket, works steadily under any retrieval speed, and calls in hungry fish from far away. Another attribute is the incredibly sharp treble hook Mustad KVD Triple Grip.

Available version

F

How to fish it?

The technique is simple and similar to the one used with our Salmo LIL'BUG. Cast the lure aiming between the surface weeds or cattails and retrieve it while keeping the rod tip high. That way you can keep the lure on the surface and tempt the fish with the "V" shaped wake. When you observe an undecided pike following your lure, lower the rod tip in order to pull the lure slightly under the surface.

model	version	length (cm)	weight (g)	hooks	recommended mono / braided line (mm)	running depth spinning (m)
BB	floating	5,5	26	One - No.1	0,25 / 0,15	surface

For additional details regarding model and colour availability, please refer to our order form.

BOXER

Lure type - crankbait
In the Salmo offer since - 2003
Available sizes - 4 and 7 cm
Available versions - shallow runner and super deep runner
Available colours - 2
Recommended method of fishing - casting, trolling
Recommended for - wels catfish, pike, bass, perch

GT - Green Tiger

SGH - Silver Ghost

If you like crankbaits and their strong, aggressive action then this lure for sure will become your favorite. It casts like a bullet, stirs up water pretty good and makes plenty of noise; therefore you can use it in any conditions.

Available versions

SR

SDR

How to fish it?

Just like in the case of all crankbaits, the most effective method for Boxer is a steady retrieve. BOXER is a floating lure, so after a few quick cranks to bring it down under the surface, we slow down the retrieve in order to keep it in the strike zone. When fishing the shallows, it is good to let the BOXER float up on the surface and leave it there for a moment or two. Both versions of the lure – SR and SDR are good for trolling and can be worked even under high speeds. When fishing deeper we use additional weight 20 – 100 g, and we place it about 1 m in front of the lure.

model	version	length (cm)	weight (g)	hooks	recommended mono / braided line (mm)	running depth spinning / trolling (m)
BX4SR	floating	4,5	6	Two - No.8	0,20 / 0,12	0,5 / 1,5
BX4SDR	floating	4,5	7	Two - No.8	0,20 / 0,12	1,5 / 4,1
BX7SR	floating	7	26	Two - No.2	0,25 / 0,15	1,0 / 2,0
BX7SDR	floating	7	28	Two - No.2	0,25 / 0,15	2,5 / 5,2

For additional details regarding model and colour availability, please refer to our order form.

BULLHEAD

Lure type - crankbait
 In the Salmo offer since - 1991
 Available sizes - 4, 6 cm (F, S, SDR) and 8 cm (SDR only)
 Available versions - floating, sinking and super deep runner
 Available colours - 6
 Recommended method of fishing - casting, trolling
 Recommended for - trout, zander, walleye, pike, perch

Bullhead F, S

Bullhead SDR

Fishermen from all over the world cannot be wrong. Salmo BULLHEAD is the best sculpin imitation available on the market. But the looks themselves are not enough to explain almost unbelievable effectiveness of this lure. The secret of the BULLHEAD family is the perfect composition of form and content – shape, color and unbelievable action in the water. Although designed for stream brown trout, it turned out to be effective in large rivers and lakes too.

Available versions

F, S

SDR

How to fish it?

When you want to use BULLHEAD in the rivers with strong current you can retrieve it both with and against the current. Cast it slightly upstream and then retrieve it with a slight arc back under your feet. The SDR model is indispensable in the most technically difficult spots due to its almost unbelievable ability to bounce off the snags. In large rivers we usually retrieve it against the current, cranking it back slowly with plenty of stops along the way, mixed with light twitching. When trolling we should pull it about 30 m behind the boat under low speed. In that case also the SDR model would be the most effective.

model	version	length (cm)	weight (g)	hooks	recommended mono / braided line (mm)	running depth spinning / trolling (m)
BD4F	floating	4,5	3	Two - No.8	0,18 / 0,10	0,5 / 1,0

BUTCHER

Lure type - crankbait
In the Salmo offer since - 1991
Available size - 5 cm
Available versions - floating, sinking and super deep runner
Available colours - 8
Recommended method of fishing - casting, trolling
Recommended for - pike, perch, trout, zander, walleye, bass

BE - Beetle

BR - Butcher

GS - Grey Silver

GT - Green Tiger

HBR - Hot Butcher

PH - Perch

RD - Real Dace

RH - Red Head

It is one of the oldest models in the Salmo offer. Originally designed for brown trout, it proved itself in many habitats all over the world and against many different species. A frugal and wobbly action of the BUTCHER proved to be too much to handle for many trophies all over the world!

Available versions

How to fish it?

The floating version should be retrieved slow and steady against the current. Very effective method is stopping the lure in a „fishy spot” and letting it wobble under the current without any retrieve. The sinking version can be fished with the current too. We should retrieve it slowly with short, gentle pulls about half way to the bottom. We use it in similar fashion in lakes and ponds, first letting it sink to the desired depth. The SDR version can be fished both with and against the current. In lakes we fish it by sinking the lure down with one quick jerk, and then retrieving it back quickly and erratically.

model	version	length (cm)	weight (g)	hooks	recommended mono / braided line (mm)	running depth spinning / trolling (m)
BR5F	floating	5	5	Two - No.8	0,20 / 0,12	0,8 / 1,5

BR5SDR	floating	5	6	Two - No.8	0,23 / 0,15	2,5 / 4,0

For additional details regarding model and colour availability, please refer to our order form.

EXECUTOR

Lure type - crankbait
 In the Salmo offer since - 2004
 Available sizes - 5, 7, 9 and 12 cm
 Available versions - shallow runner and super deep runner
 Available colours - 12
 Recommended method of fishing - casting, trolling
 Recommended for - pike, zander, trout, walleye, seatrout, asp, bass, danube salmon

This one is a treat for all the traditionalists out there. Proven shape and flawless tail-side action are two traits that should convince anyone to try at least one sample from the EXECUTOR family.

Available versions

How to fish it ?

In stagnant waters retrieve the lure with changing speed and pauses, letting it float close to the surface. Shallow Runner version is perfect for trolling both with and without the added weight placed 0,8 – 1,2 m before the lure on the separate leader. In large river a slow retrieve across or against the current proved to be a very effective method. In small streams you will have the best results when fishing with the current. For that kind of tactic EXECUTOR 5SDR will be your best bet.

model	version	length (cm)	weight (g)	hooks	recommended mono / braided line (mm)	running depth spinning / trolling (m)
EX5SR	floating	5	5	Two - No.7	0,20 / 0,12	0,6 / 1,2

For additional details regarding model and colour availability, please refer to our order form.

FANATIC

Lure type - crankbait
In the Salmo offer since - 2004
Available size - 7 cm
Available version - floating
Available colours - 4
Recommended method of fishing - casting, trolling with additional weight
Recommended for - trout, pike, perch, chub, asp

This is another offering for all the fans of ultra-light fishing out there. Delicate and snake-like action of this double jointed lure is virtually impossible to duplicate with similar lures of different brands. Because of this trait, even the fishing pros see FANATIC as a true gem among the lures.

Available version

How to fish it?

For spin fishing, we recommend delicate and sensitive rod. Keep in mind that because of its unique action FANATIC is able to tempt even the cleverest and experienced fish. When you deal with such sly trophy predators, bites are often very delicate and therefore hard to notice. With this lure we fish usually in shallow (0.5 – 2 m) places. Retrieve FANATIC very slowly with short (ok. 0.5 m) pulls. In rivers pull it slowly across or against the current. You can troll it both with and without the additional weight which should be placed on the separate leader and at least 0.8 m from the lure. In that case you should also use stronger rod. A perfect addition to that setup would be a thin braid line about 0.08 mm. Then fish usually will hook themselves.

model	version	length (cm)	weight (g)	hooks	recommended mono / braided line (mm)	running depth spinning / trolling (m)
IF7F	floating	7	5	Two - No.8	0,18 / 0,08	0,5 / 1,0

FATSO CRANK

Lure type - crankbait
In the Salmo offer since - 2005
Available sizes - 10 cm
Available version - floating
Available colours - 4
Recommended method of fishing - casting, trolling
Recommended for - pike, wels catfish, bass, muskie

HOP - Holographic Perch

HOR - Holographic Roach

RD - Real Dace

RPH - Real Perch

Is it even possible to improve the action of FATSO? Of course not, because FATSO is a one of the kind lure. However our SALMO designers decided to fit our good old FATSO with a bill. That is how FATSO CRANK was created – a totally new lure with a unique action – a surface super - crankbait with an incredibly strong side/tail action – a perfect offering for shallow and weedy spots.

Available version

How to fish it?

FATSO CRANK is perfect for both casting and trolling. But you have to keep in mind that this is a sub-surface lure, a typical „wake-bait”. A bill that is placed almost perpendicularly to the lure’s axis enables it to be retrieved on the surface when one so desires. Therefore Salmo FATSO CRANK is most effective in places that are about 1 – 2 m deep. A fat body and buoyancy cause this lure to make a strong wake during a retrieve that can be seen from far away. Fishing the FATSO CRANK is fairly simple. After a cast keep your rod tip high and retrieve it back slowly and steadily while observing the area around the lure. The strikes on this lure are aggressive and spectacular. It can also be trolled when the water we fish is about 1 – 3m deep. When trolling deeper we should use the additional weight placed about 1 – 1,5 m in front of the lure. The size of the weight should depend on the depth that we want to reach with our lure.

model	version	length (cm)	weight (g)	hooks	recommended mono / braided line (mm)	running depth spinning / trolling (m)
F10C	floating	10	38	Two - No.1	0,30 / 0,20	0,8 / 1,5

For additional details regarding model and colour availability, please refer to our order form.

FREEDIVER

Lure type - crankbait
In the Salmo offer since - 2016
Available sizes - 12 cm
Available versions - super deep runner
Available colours - 9
Recommended method of fishing - trolling, casting
Recommended for - zander, walleye, pike, perch, wels catfish

How to fish it?

Have you ever thought about extremely deep fishing? Ok, take a deep breath and relax; now it will be easier than ever before! Salmo FREEDIVER 12 Super Deep Runner (SDR) is equally effective during casting and trolling. The best way to explore its unique qualities is just to try it out. When pulled on a 0.16 braid, 35m behind the boat with a speed of 3.2 km/h, our FREEDIVER 12 will easily go down up to 9 m deep. Increasing the distance between the lure and the boat will cause it to go down even deeper. When pulled 60 m behind a boat, FREEDIVER can go down up to 12 meters. Such depth is simply unattainable for other lures on the market with similar parameters. As mentioned before, FREEDIVER is also fitted with a long - cast system that makes it possible to throw it far distances during traditional spin fishing.

Available version

FREEDIVER is a floating, deep diving crankbait with some unique qualities. This is a modern lure designed for extreme trolling that can reach depths that are unattainable for other crankbaits. Additional attributes of FREEDIVER are – a built in rattle with two voice chambers that generate noise of different frequencies, long - cast system and excellent set of treble hooks Mustad KVD Triple Grip. The use of the highest quality components and hi-tech production methods is the main reason the quality of this lure far exceeds anything available on the market. Designed strong enough with a tear strength of 30 kgs. Our lab tests proved that our competitors' lures can only dream of having such qualities. The effectiveness of FREEDIVER was tested on many locations in Europe and United States. However no matter the lake or river, our new child from Salmo family proved its mettle by catching predators every time it was tested. The main purpose for this lure was to catch zander from large depths. Our tests proved that fish of many species appreciated the work of our Salmo designers. FREEDIVER is already responsible for many trophies including over two meter long wels catfish!

model	version	length (cm)	weight (g)	hooks	recommended mono / braided line (mm)	running depth spinning / trolling (m)
FD12	floating	12	24	Three - No.4	0,25 / 0,16	5 / 9

For additional details regarding model and colour availability, please refer to our order form.

FRISKY

Lure type - crankbait
In the Salmo offer since - 2006
Available sizes - 5 and 7 cm
Available versions - shallow runner and deep runner
Available colours - 4
Recommended method of fishing - casting, trolling
Recommended for - pike, perch, zander, walleye, trout, seatrout

GT - Green Tiger

RD - Real Dace

RHP - Real Perch

SBO - Silver Blue Orange

An amazing lure - the result of a long experimentation of our Salmo designers over the two pieces jointed lures. The purpose - to create a perfect lure with ideal combination of hydro and aerodynamic properties was reached in 100%! FRISKY has a perfect action under any type of retrieve and absolutely no issues when casting - which is so often typical for jointed crankbaits.

Available versions

How to fish it?

FRISKY is a floater but its buoyancy is fairly small. Because of that it is perfect for fishing both with and against the current. Very effective trick is pulling it across the current and every once in a while stopping the retrieve. The technique looks like this: crank the reel 2-3 times, stop, then do a fast twitch with the rod tip and eliminate the slack line with another 2-3 cranks of the reel. In stale waters we fish like with any other floating crankbait - with frequent stops, accelerations and slight twitches of the rod tip. Both versions of FRISKY are perfect for both fast and slow trolling. When trolling deep we should use the DR version with an additional weight.

model	version	length (cm)	weight (g)	hooks	recommended mono / braided line (mm)	running depth spinning / trolling (m)
FR5SR	floating	5	5	Two - No.8	0,18 / 0,10	1,0 / 1,5

HORNET

Lure type - crankbait
 In the Salmo offer since - 1995
 Available sizes - 2, 3, 4, 5 and 6 cm
 Available versions - floating, sinking and super deep runner
 Available colours - 25
 Recommended method of fishing - casting, trolling
 Recommended for - trout, bass, walleye, perch, seatrout, pike, ide, chub, asp

From the moment it was introduced to our Salmo family long time ago it became the absolute bestseller. The perfect combination of construction and balance create an incredible action that fish find it irresistible. If you look for a lure that can catch anything that swims in the water then HORNET is your best choice! Small, quick and wickedly effective – those are the opinions of anglers from over a dozen countries all over the world. In June of 2013 Hornet 4F was named by In Fisherman magazine - largest and most influential fishing periodical in the world, as the best walleye (american zander) crankbait of all time! In order to earn such opinion it must be truly well deserved!

Available versions

How to fish it ?

HORNET is a typical crankbait with strong and aggressive action. It does not require the intrinsic knowledge of secret spin fishing techniques. It simply works from the moment it touches the water, both in the hands of a beginner and an experienced angler alike. In rivers it is perfect for fishing with the current. The speed of the retrieve should be slightly faster than the speed of the current. However, it is also effective when being pulled against the current, especially when you “park” it and let it wobble in fishy spots. HORNET is equally effective when fishing in stale waters, both when spinning and trolling. However in order to fully utilize the potential of this lure it is crucial keep in mind the parameters of your fishing tackle. We strongly recommend light rods, small swivels snaps and thin lines.

CB - Chartreuse Blue

GFP - Gold Fluo Perch

GS - Grey Silver

GT - Green Tiger

HBL - Holo Bleak

HBS - Holographic Blue Sky

HP - Hot Perch

RTS - Red Tail Shiner

UVO - Ultraviolet Orange

Available version

In many places all over the world Salmo HORNET is thought as the best lure of all time. But for us it was not enough, so in cooperation with the best American anglers, we created new and better version of this lure. It is a floating RATTLIN' HORNET. You can expect the same effectiveness and a strong action easily felt on your rod tip. RATTLIN' HORNET however has qualities that other Hornets do not possess. A built in rattle, long cast SICS system and Mustad KVD Triple Grip hooks are attributes that make this crankbait a universal, multipurpose weapon that can be used to catch all predatory fish.

How to fish it ?

Salmo RATTLIN' HORNET can be used in many ways and is effective in almost any situation. It is a very universal lure that can be used on any predatory fish. It is excellent for fishing both with and against the current. When fishing lakes and rivers it can be both casted and trolled. We fish it like any other floating crankbait - irregular retrieve with frequent pauses and light twitches. During trolling RATTLIN' HORNET works perfect both with and without the additional weight.

For additional details regarding model and colour availability, please refer to our order form.

HORNET 9

Lure type - crankbait
 In the Salmo offer since - 2011
 Available size - 9 cm
 Available version - floating
 Available colours - 9
 Recommended method of fishing - casting, trolling
 Recommended for - wels catfish, pike, barramundi, snakehead, murray cod

Created in cooperation with the best wels catfish hunters from Hungary and introduced to our offer in 2011, HORNET 9 quickly proved to be a worthy addition to the Salmo family! When looking at other large crankbaits offered by our competition, there are not too many that can match ours in quality. Like it should be for a lure designed for monsters, HORNET 9 can take on even the largest of the wels catfish. Its additional attributes are extra strong split rings and special treble hooks VMC Spark Point 3X strong.

Available version

How to fish it?

The action of HORNET 9 is similar to its smaller siblings, which means it is very strong and can be easily felt on the rod tip. This lure is perfect both for casting and for trolling. When fishing rivers, the best way is to cast it slightly upstream. Then with a few quick cranks of the reel bring the HORNET down 1,5 – 2 m and begin a steady retrieve. When fishing the stagnant waters, it is very effective stop the retrieve once in a while. Trolling is also very effective, both with and without the additional weight. The strong vibrations on the rod tip make it very easy to observe and control this crankbait even if it is being trolled 50m behind the boat.

Lil'Bug

Lure type - crankbait
In the Salmo offer since - 2014
Available sizes - 2 and 3 cm
Available versions - floating
Available colours - 7
Recommended method of fishing - casting
Recommended for - chub, ide, asp, trout, perch

BBG - Bloody Bug

DBE - Dunk Beetle

GBG - Green Bug

LB - Ladybird

MBG - May Bug

PBG - Pearl Bug

WSP - Wasp

Salmo LIL'BUG is a perfect example of tradition and modern technology, all combined in one little lure. This surface crankbait is our answer for ever more popular ultralight fishing. This is the first time ever that such a small lure was fitted with a long-cast design - Salmo Infinity Cast System (SICS). Our field tests confirmed not only incredible castability, but also incredible effectiveness of the Little Bug.

How to fish it?

There are few basic techniques of fishing with the Salmo LiL'BUG. First one is walking down with the current and retrieving the lure by sliding it across the surface. Retrieve LiL'BUG very slowly, with a steady speed and keep

Available version

the rod tip high. Try to keep the lure close to the surface so that it will leave the "V" shape wave. If the current is strong enough to wobble the lure without the retrieve, it is good to hold the lure steady especially in "fishy" spots. But keep in mind that lure should not lose its action and be constantly wobbling with a "V" shaped wake on the surface. When fish are feeding they can prowl the shallows that are even less than 0,5 m. Large chubs, ide, and even asps can hunt in such shallows only if there is a deeper run nearby. Another interesting technique is a dead drift during which your only task is to reel in the slack line so that the lure will drift straight to the waiting fish. It is almost exactly like fly fishing on a dry fly. Just the sight of insect or small fish floating motionless of the surface is often enough to provoke the strike. However if such a steady drift does not bring a desired result, throw the lure right where the fish are. You need to concentrate and close the reel bail right away because oftentimes the strike will come right when the lure will touch the water surface. The most important thing in all the techniques mentioned above is to keep the line out of the water as much as possible so that it won't spook the fish. The strikes are usually strong and spectacular, but like with the other surface lures you should set the hook only after feeling the weight of the fish.

GT - Green Tiger

HRM - Holo Real Minnow

RBD - Rainbow Dace

T - Trout

GM - Golden Minnow

HBL - Holo Bleak

M - Minnow

D - Real Dace

WOD - Wounded Dace

Despite the fact that this is one of the oldest lures in the Salmo family, a lot of anglers all over the world are still mesmerized by this classic twitchbait. It is characterized by fairly narrow and high frequency action. It is a universal lure for catching all predatory fish in all kinds of habitats.

Available versions

How to fish it?

Really there is no wrong way to fish the MINNOW. In the rivers you can fish it with, across and against the current. In any case the best option is an irregular retrieve mixed with pauses and twitches. MINNOW 7SDR is an excellent trolling lure that works flawlessly both at low and high speed.

PERCH

Lure type - crankbait / twitchbait
 In the Salmo offer since - 1992
 Available sizes - 8, 12 and 14 cm
 Available versions - floating, shallow runner, deep runner and super deep runner
 Available colours - 9
 Recommended method of fishing - casting, trolling
 Recommended for - pike, muskie, perch, zander, walleye, bass, Nile perch

Available colours of SDR version only:

Available colours of F, SR, DR, SDR:

LRH - Luminescent Red Head

HOP - Holographic Perch

HGS - Holo Grey Shiner

HP - Hot Perch

PH - Perch

SIB - Silver Blue

GT - Green Tiger

GS - Grey Silver

RR - Real Roach

It is a typical crankbait with strong, aggressive action. It is another Salmo classic that lived to see its many imitations made by our competitors. This fact itself is a best proof of this lure's unbelievable effectiveness. Most anglers agree that this is still the best perch imitation - a fish common in all European waters.

Available versions

How to fish it?

Many world renown pike fishermen say that this is lure is your best bet if you want to troll for those toothy beasts. It is also excellent when used during traditional casting. Like with any other crankbait we employ a steady retrieve mixed with some pauses and twitches. Each of our six models from the PERCH family is characterized by a slightly different action and different diving depth. That way you can choose a lure for any occasion. Salmo PERCH is sold in three different sizes and in Floating, Shallow Runner, Deep Runner and Super Deep Runner versions.

PIKE

Lure type - crankbait/twitchbait
In the Salmo offer since - 1992
Available sizes - 9, 11, 13, 16 cm
Available versions - floating, jointed, deep runner and super deep runner
Available colours - 3
Recommended method of fishing - casting, trolling
Recommended for - pike, muskie, zander

HPE - Hot Pike

PE - Pike

RPE - Real Pike

It is a common knowledge that pike are vicious cannibals and for many years lure manufacturers and fishermen alike exploited this fact without mercy. Our Salmo PIKE crankbait is unmatched by any other lure, both in terms of a perfect pike color pattern and a specific action that proved to be too much to handle for many toothy trophies that fell victim to its charm.

Available versions

How to fish it?

All our PIKE models are perfect for fishing shallow areas anywhere from 0.5m (PIKE 9F, PIKE 11F) up to 3 – 5 m (PIKE 9SDR, PIKE 16F). Just like with most other crankbaits, you will have the best results when employing irregular retrieve with frequent pauses. In large rivers pull this lure slowly against the current and keep in mind to “park” it in spots that are most likely to hold hungry fish. PIKE is also perfect for trolling - both with and without the additional weight.

SKINNER

Lure type - twitchbait
In the Salmo offer since - 2004
Available sizes - 10, 12, 15, and 20 cm
Available version - floating
Available colours - 5
Recommended method of fishing - casting (twitching)
Recommended for - pike, muskie, zander, perch, bass, nile perch

GT - Green Tiger

HGS - Holo Grey Shiner

HP - Hot Perch

RGS - Real Grey Shiner

RR - Real Roach

Without a doubt this is one of the best twitchbaits in the world. Original shape and unbelievably aggressive action are two traits that will make any trophy hunter drool over this lure. Just after a few casts you will be amazed by what SKINNER can do. It does not dive too deep but large predators do not seem to mind- they come right up from the few meters down just to crush it!

Available version

How to fish it?

There are not too many wobblers that can be used as a surface lure, jerkbait and twitchbait. Because of that ability SKINNER is a truly unique lure. When casting we recommend mixing up several different techniques. This lure works aggressively even during the slowest retrieve. However it is during the “twitching” technique when it will show its true power. All that you have to do is to reel it back with a steady speed and short jerks. Longer and deeper radek.daniluk1976predator lurking nearby. During trolling the most effective will be pulling and jerking the lure from time to time.

SPARKY SHAD

Lure type - crankbait/twitchbait
 In the Salmo offer since - 2016
 Available sizes - 4 cm
 Available version - sinking
 Available colours - 8
 Recommended method of fishing - spinning, casting
 Recommended for - perch, trout, zander, chub, ide

HCD - Holographic Crawdad

HGOS - Holographic Gold Orange Shad

OBGT

BHS - Blue Holographic Shad

BHT - Brown Holographic Trout

GT - Green Tiger

SHS - Silver Holographic Shad

YHP - Yellow Holographic Perch

SPARKY SHAD is a typical crankbait but with atypical side profile (Delta Δ). Because of such design and a special weight distribution this lure has truly unique action unmatched in any other mass produced wobbler. During slow retrieve speed, SPARKY SHAD'S action is a combination of side wiggle and wide tail swings. On the other hand with higher speed the range of those swings decreases exponentially but the frequency increases up to a point that is unmatched by any other lure of similar kind.

Available version

S

How to fish it?

SPARKY SHAD is a very universal lure that can be used on any predatory fish. You can use it both lakes and rivers. Fish it like with any other crankbait- with a steady retrieve. But the most effective method is an irregular retrieve mixed in with some short jerks and twitches. Because of the special construction of the long-cast system (SICS), the internal weight of the lure shifts to the rear during stronger jerks and at the same time changes center of gravity of the lure, this in turn causes it to work with wider swings. When the lure stops, the internal weight moves back to its place and stabilizes the crankbait's action. With some practice, any angler can breathe an unique action into this crankbait that will be virtually irresistible even for the most sluggish fish. Keep in mind to always keep the tight line because SPARKY SHAD can be crushed at any moment!

model	version	length (cm)	weight (g)	hooks	recommended mono / braided line (mm)	running depth spinning/trolling (m)

STING

Lure type - twitchbait
 In the Salmo offer since - 2001
 Available sizes - 6 cm
 Available versions - floating and suspending
 Available colours - 7
 Recommended method of fishing - casting, trolling
 Recommended for - zander, walleye, pike, asp, seatrout, salmon, trout, sea bass, bass

BMB - Black Metallic Bleak

GS - Grey Silver

GT - Green Tiger

HBL - Holo Bleak

HP - Hot Perch

RBL - Real Bleak

SMB - Silver Metallic Bleak

STING is a classic twitchbait with a delicate and fine action. Available in 6 cm size and floating (F) and suspending (SP) versions. Its slender body imitates many of the species of prey fish that predators in both lakes and rivers survive. Colours are either very imitative, or classic fantasy. This makes choosing the right one for your fishing situation easy. Built in rattle adds to the lure's attraction.

Available versions

F, SP

How to fish it?

When fishing the rivers, just cast it across the current and then slowly retrieve it back to the river bank. Floating version is perfect for letting it float down river with the current. When fishing for the species that are quick and mobile (asp, sea trout), keep the rod tip high and ramp up the speed of your retrieve. The neutral version (suspending) does not sink or float back to the surface but stays at a certain depth. It is perfect for provoking strikes even from the most sluggish and undecided predators. Retrieve this lure with long (0.5 – 1 m) and fairly decisive pulls (twitching). Then reel back the slack line and repeat. Keep in mind to observe the line during those pauses because that is when a lot of the strikes happen. During trolling STING works perfectly both on its own and with the additional weight placed about 1 m before the lure.

model	version	length (cm)	weight (g)	hooks	recommended mono / braided line (mm)	running depth spinning / trolling (m)
S6F	floating	6	3,5	Two - No.8	0,18 / 0,10	0,8 / 1,5

THRILL

Lure type - thrill minnows
 In the Salmo offer since - 2007
 Available sizes - 4, 5, 7 and 9 cm
 Available version - sinking
 Available colours - 10
 Recommended method of fishing - casting / fast retrieve under surface
 Recommended for - asp, sea trout, seabass, perch

BF - Blue Fingerlig

BMB - Black Metallic Bleak

BMG - Blue Metallic Ghost

EF - Emerald Fish

GF - Gunmetal Fish

HBL - Holo Bleak

OB - Olive Bleak

RBL - Real Bleak

SFF - Silver Flashy Fish

SGH - Silver Ghost

It is a very unique crankbait designed specifically for hunting asp. THRILL is an almost ideal imitation of a common bleak – asp’s favorite and most preferred prey. Both the shape and high frequency, flashy action of this lure make it hard to tell the difference from the live fish. Large mass and unique aerodynamics now place previously unreachable fish within your casting range. There is no doubt that THRILL will start a new era among the asp lures. New for 2017 is a smallest size Thrill lure, measuring 4 cm long and weighing 4 gr.

Available version

How to fish it?

THRILL is a lure for mission impossible. Even though it is made only in sinking version and is pretty heavy for its size, it is designed to be retrieved just below the surface. After making a long cast, begin cranking on the reel and keep the rod tip high. It must be retrieved at a really high speed, so make sure to use the reel with a high rotation ratio. Also make sure to mix in twitches and jerks without while cranking on the reel at the same time. When fishing in deeper spots, we use the technique similar to slow jigging. THRILL is also excellent for perch. After letting it drop down to the bottom, fish it the same way like you would with a soft plastic lure.

TINY

Lure type - crankbait
 In the Salmo offer since - 2004
 Available size - 3 cm
 Available versions - floating and sinking
 Available colours - 14
 Recommended method of fishing - casting
 Recommended for - chub, trout, ide, perch

BC - Black Cockchafer

BT - Black Tiger

CC - Cockchafer

EB - Electric Bug

GGT - Green Gold Tiger

GRH - Grasshopper

HBS - Holographic Blue Sky

HC - Hot Cockchafer

HGS - Holographic Gray Shiner

LB - Ladybird

OYT - Orange Yellow Tiger

SBT - Silver Blue Tiger

SI - Silver

YT - Yellow Tiger

Available versions

This is a lure for special tasks. It can be lethal in warm weather during the massive insect hatches. Aggressive action and perfect aerodynamics make this lure a one of its kind. Every fan of ultra-light fishing should have at least one TINY in his arsenal!

How to fish it?

TINY works flawlessly being retrieved both with and against the current. With floating and sinking versions, you can easily explore all interesting spots in creeks and rivers. A classic method when fishing the larger rivers is a very slow retrieve across the current. In small overgrown streams fishing against the current will be your best bet. Let the lure float down with the current and then slowly retrieve it back, pausing it from time to time in “fishy” spots.

WHACKY

Lure type - crankbait
 In the Salmo offer since - 2012
 Available size - 9, 12, 15 cm
 Available version - floating
 Available colours - 11
 Recommended method of fishing - casting, trolling
 Recommended for - zander, pike, sea trout, salmon, trout, landlocked salmon, ferox, walleye

BMB - Black Metallic Bleak

GFF - Glowing Fluorescent Fish

GCS - Gold Chartreuse Shad

GFL - Green Fluo

GS - Grey Silver

GT - Green Tiger

RBL - Real Bleak

SCS - Silver Chartreuse Shad

SIB - Silver Blue

SPA - Spotted Parrot

UVO - Ultraviolet Orange

WHACKY is a unique twitchbait designed in cooperation with trolling masters from Finland. Because of the special weight distribution and original shape of the bill, this lure has truly unmatched and irregular action.

Available version

How to fish it?

This wobbler was created for anglers who troll for species like zander, brown trout or lake trout. Its action is easy to control and depends from the speed of the boat. It is effective when trolled on its own and with additional weight or with downriggers. Despite the fact that WHACKY was designed mainly for trolling, it also proved to be effective during traditional casting. You can use it both in rivers with strong current and in stale waters. Its round bill with a unique profile gives this lure incredible action no matter what method you will choose. Just cast it out and right away you will notice how sensitive and unstable is WHACKY's action, and how quickly it changes under different speeds. With slower speed its action is stable – ideal for cold water conditions. But when you increase the speed of your boat- the “personality” of this lure changes dramatically. Suddenly high frequency side wiggles are joined by irregular, elongated “S” shaped trajectory. This type of action is the result of using high buoyancy body and a unique round shaped bill. When WHACKY wiggles in the water, treble hooks hit the sides of the lure and generate additional noise, calling in predators from the distance.

UNIQUE WHACKY SWIMMING ACTION

WHITEFISH

Lure type - crankbait / twitchbait
In the Salmo offer since - 1992
Available size - 13 cm
Available versions - floating, deep runner, jointed, super deep runner
Available colours - 4
Recommended method of fishing - casting (twitching), trolling
Recommended for - pike, wels catfish, zander, muskie, danube salmon

BS - Blue Silver

GT - Green Tiger

HP - Hot Perch

RH - Red Head

Salmo WHITEFISH is one of the pillars upon which the Salmo brand was built. It is responsible for countless trophies from many different species caught all over the world. Classic slim minnow shape and strong side-tail actions are two main features of this wobbler.

Available versions

How to fish it?

The best technique that has proven itself both in lakes and rivers is a slow, steady retrieve combined with gentle pulls. It is worth to note that twitching can be also very effective with Salmo WHITEFISH. It is perfect when the lure moves with short (ok. 0.5 – 0.8 m) jumps and slows down and pauses from time to time. WHITEFISH is also great for trolling by itself and with an additional weight placed 1m before the lure on a separate leader.

JERKBAITS & PULLBAITS

FATSO
JACK
SLIDER
SWEEPER
WAVE

FATSO

Lure type - pullbait
In the Salmo offer since - 2001
Available sizes - 10 and 14 cm
Available versions - floating and sinking
Available colours - 10
Recommended method of fishing - casting, trolling
Recommended for - pike, muskie, zander, wels catfish

FATSO is a lure that opened entire new horizons for all trophy hunters out there. This lure is a unique hybrid of wobbler and jerkbait. At the first glance, a lazy action of this lure will remind you of a large spoon. However any skilled angler that tried using it as a twitchbait, jerkbait, wobbler or by trolling it behind a boat, will confirm what an amazing and lethal weapon it can be.

Available versions

F, S

How to fish it?

FATSO can be retrieved in many ways. You can fish it actively with delicate pulls and jerks, with a steady retrieve or by fast or slow trolling. On the shallow 0.5 – 1m flats, fish it with a rod tip held high. In deeper spots lower the rod tip and apply slow, steady retrieve or a series of pulls. Sinking model is indispensable in deeper spots or during periods of low fish activity. Retrieve it as slowly as you can and apply frequent pauses. That is when FATSO falls down slowly but still wobbles and drives crazy even the laziest fish. Keep in mind to control the tension on the line so you won't miss a strike. If you want to troll spots that are 2 – 4 m deep use floating FATSO without any additional weight. This method is especially effective in places where the depth varies. If you want to troll in places that are 4 – 15 m deep use additional 50 – 100 g weight.

JACK

Lure type - jerkbait
In the Salmo offer since - 2001
Available size - 18 cm
Available versions - floating and sinking
Available colours - 2
Recommended method of fishing - casting
Recommended for - pike, muskie

Salmo JACK is a typical jerkbait and another lure that confirms Salmo's mastery in imitating nature. Just take a look at this beauty! If you decide to use JACK more often, soon you will realize that there are not too many lures that can be as deadly in catching trophy predators. Try it out in the spring among newly emerging weeds, or in late fall in shallow flats where the weeds are dying off. Trust me you will be as surprised as the toothy monsters that will end up at the end of your line.

Available versions

F, S

How to fish it?

JACK is a typical jerkbait – it does not have any action of its own. Everything is in the hands of the angler. Floating version is best suited for fishing shallows in the spring (0.5 – 2 m). Keep the rod tip high and make short and quick jerks. After every pull make a short 1 – 2 sec pause. Pike following a lure usually strikes when the lure moves again after such pause. If you want to fish deeper - lower your rod tip to the water surface. With the sinking version you can fish spots that are 2 – 4m deep. Retrieving a sinking JACK should be a little different than the floating version. Use slower and longer pulls, and the pauses between them should be longer if you want to fish deeper. In reality 1m of water is enough to fish with this lure effectively. If the spot is deeper, wait for the JACK to sink to the desired depth. Then engage it with the long pulls of your rod tip.

This first European glider is a legend on its own. It had received many awards and rave reviews from fishermen all over the world. You can honestly say that SLIDER began a new era among the artificial lures. Both the unique shape (till this day the most copied by other lure producers) and a fantastic, one-of-a-kind action will cast a spell over any predatory fish and angler alike.

How to fish it?

There are few basic techniques of fishing with the SLIDER. First one is a steady retrieve. Second – more classy – consists of a rhythmic pulls of a rod tip that generate this amazing action characteristic of all gliders – short jumps from left to right. Third one is a so called “technique of long pulls”. It consists of series of long sweeps with a rod tip. After each pull reel in the slack line. During that moment lure stops and gently flashes its sides. SLIDER’S main strength is that there is no wrong way to fish it. All retrieve techniques have proved to be effective! But what is crucial is choosing the right one for the circumstances. When the water is cold (2 – 5°C) fish it very slowly – apply 3 sec pauses between each (gentle!) pull. Also use sinking model which works during the slow fall by “shimmying” its sides and driving huge predators crazy! With the increasing water temperature, also you should increase the speed of your retrieve. SLIDER is also perfect for shallow trolling. Cast it out 10 – 30 m behind the boat, and while trolling keep rod in your hand and jerk it every few seconds.

SWEEPER

Lure type - jerkbait
In the Salmo offer since - 2010
Available sizes - 10, 12, 14 and 17 cm
Available version - sinking
Available colours - 5
Recommended method of fishing - casting, trolling
Recommended for - pike, muskie, asp, peacock bass

HP - Hot Perch

RGS - Real Grey Shiner

RPE - Real Pike

SCS - Silver Chartreuse Shad

TS - Turquoise Shad

Salmo SWEEPER belongs to a whole new generation of gliders. It glides further to the sides than typical lures of this kind while requiring less effort from the angler. SWEEPER's wide glides and 180 degree turns also cause this lure to "shimmy" its sides, a little quirk that drives into frenzy any predator that is lurking nearby. Such unique action is possible due to unique shape and perfect balance of the lure's body.

Available version

How to fish it?

When using the SWEEPER you are basically imitating a weak or wounded prey fish. It cannot swim straight but drifts from left to right. This kind of movement characterized by change of speed, stops and darts to the sides is literally screaming “easy dinner!” to every predator that is nearby. That is why SWEEPER is so effective. You can cast it and troll with it too. However with casting you will have a lot more control over the action of the lure. In order to make the SWEEPER perform its glides, combine strong pulls of the rod tip while reeling in the slack line at the same time. After each pull let the lure glide to the side. The frequency and amplitude of those glides can be controlled by frequency and strength of the pulls with the rod tip. SWEEPER is a slow sinking lure and its unique balance causes it to slightly wobble or “shimmy” during the pause after each glide. You need to pay attention especially during that moment because usually that is when most strikes occur. Always observe SWEEPER’s action. Usually it stays about 0.3 – 0.6 m below the surface – that is why it is also easy to observe the strikes. This is another attribute of this lure which makes it so much fun to fish with!

WAVE

Lure type - swimming jig
In the Salmo offer since - 2017
Available sizes - 7 and 9 cm
Available version - sinking
Available colours - 8
Recommended method of fishing - casting
Recommended for - seabass, seatrout, asp

BGD - Black Gold

BRF - Black Red Fish

HBL - Holo Bleak

GHBL - Gold Holo Bleak

LTB - Luminescent Tobias

RBTB - Red Belly Tobias

HPSA - Holographic Pink Sardine

HBSA - Holographic Blue Sardine

If you hunt for predators that are feeding in shallows and require very long casts then Salmo WAVE is a lure for you! This original "swimming jig" was designed in consultation with anglers that fish for sea bass, sea trout and asp and it is definitely doing the job it was designed for. This is yet another example when our Salmo designers were able to create something simple but yet with so much potential to make even the seasoned pros stand in awe. WAVE is a sinking lure available in two sizes: 7 and 9cm. Perfect proportions of balance and weight make possible to throw this lure on huge distances and fish it effectively in places that are out of reach for other lures.

Available version

S

How to fish it?

WAVE works with all known spinning methods. It can be jerked or used like typical twitchbait or crankbait. Even the slightest twitch of the rod tip, cause this lure to move erratically and drives fish into frenzy! Very effective is a use of a "stop and go" technique, retrieve mixed with short pauses during which WAVE falls down very slowly and seductively flashes its sides. You can use it both in places that are 2-3 m deep, or on shallow reefs with submerged vegetation. If you increase the speed of the retrieve and raise your rod tip then you can make WAVE gently slide on the surface. It is a proven and very effective technique both for sea bass and asp!

For additional details regarding model and colour availability, please refer to our order form.

A photograph of a pond with water lilies and reeds. The water is dark green and reflects the surrounding vegetation. In the foreground, several large, round, green lily pads float on the water, with two white water lilies in bloom. The background is filled with tall, green reeds and grasses. The text "SURFACE LURES" is overlaid in the center of the image.

SURFACE LURES

A serene pond scene with lily pads and white flowers in the foreground, and a dense thicket of reeds in the background. The water is dark and reflects the surrounding greenery. A log floats in the middle ground. The text is overlaid in the center.

POP
ROVER
SPITTIN' ROVER

POP

Lure type - popper
In the Salmo offer since - 2001
Available size - 6 cm
Available version - floating
Available colours - 7
Recommended method of fishing - casting
Recommended for - bass, perch, pike, asp

BB - Baby Bass

CK - Carbon Killer

GMS - Gold Metallic Shiner

SMS - Silver Metallic Shiner

SH - Shiner

YPH - Yellow Perch

WF - White Frog

This is a must have for anyone that hunts “surface” predators. The mix of perfect balance and construction of the POP is what gives this lure unique noise so characteristic to all poppers.

Available version

How to fish it?

There are few ways of fishing with the POP. Which one you choose depends on the spot and fish's activity. During the intense feeding activity you will achieve the best results with a fast and steady retrieve. POP will just slide across the surface causing fairly small disturbance. Second technique is rhythmic, energetic jerks. That is when the lure disturbs the water surface and makes gurgling noise. After every jerk, let the lure rest motionless on the surface for a few seconds. Then reel in the slack line and give it another jerk. POP should have fairly long 0.3 – 0.4m jumps. During a low feeding activity, use the third method. Retrieve this lure quickly and energetically with a series of short (0.1 – 0.3 m) jumps. Perform several such twitches and then leave POP lying motionless for 3 – 4 sec; then repeat from the beginning. Most often you will achieve best results when you will use the combination of all three techniques mentioned above.

model	version	length (cm)	weight (g)	hooks	recommended mono / braided line (mm)	running depth spinning (m)

ROVER

Lure type - surface „walk the dog” lure (stickbait)
In the Salmo offer since - 2005
Available size - 7 cm
Available version - floating
Available colours - 5
Recommended method of fishing - casting
Recommended for - bass, perch, pike, asp

SIB - Silver Blue

HBL - Holo Bleak

CBK - Chrome Black

HP - Hot Perch

PBO - Pearl Black Orange

Salmo ROVER was constructed in cooperation with the best bass fishermen on North American continent. It is a unique popper/stickbait hybrid that also possesses additional “skills”. Construction and balance make fishing with this lure fun and easy. It is also worth to mention the incredible aerodynamic properties of the ROVER.

Available version

How to fish it?

SALMO ROVER is a surface lure that can be fished with all surface techniques available to this class of lures. Sliding it across the surface – or the so called “walk the dog” action is a piece of cake for ROVER! All you need are gentle twitches of the rod tip. But you can also fish it like a traditional popper. Sometimes the best results can be achieved by quick and steady retrieve across the water surface. Usually the most effective will be the combination of those three methods. In lakes and ponds use ROVER between cattails and over weedy flats. After making a cast, wait for a few seconds and retrieve it back with frequent stops every few meters.

model	version	length (cm)	weight (g)	hooks	recommended mono / braided line (mm)	running depth spinning (m)
RV7	floating	7	11	Two - No.5	0,22 / 0,12	surface

SPITTIN' ROVER

Lure type - surface „prop” lure
In the Salmo offer since - 2005
Available size - 7 cm
Available version - floating
Available colours - 5
Recommended method of fishing - casting
Recommended for - bass, perch, pike, asp

SIB - Silver Blue

HBL - Holo Bleak

CBK - Chrome Black

HP - Hot Perch

PBO - Pearl Black Orange

It is another classic among the surface lures that was created in cooperation with the best bass anglers from across the pond. SPITTIN' ROVER is extremely universal bait. It is a hybrid between popper and a prop lure. It flies very well and enables anglers to reach even those fish that are very far away.

Available version

How to fish it?

You will achieve good results with any surface lure technique. However the most classic and probably most effective method are series of 0.3 - 0.5m long pulls mixed with short pauses so that SPITTIN' ROVER will dive below the surface with a characteristic splash and then come back up. The lure's turbine should create air bubbles under surface of the water.

VERTICAL LURES

CHUBBY DARTER
ZIPPER

CHUBBY DARTER

Lure type - vertical lure
In the Salmo offer since - 2002
Available sizes - 3, 4, 5 cm
Available version - sinking
Available colours - 7
Recommended method of fishing - vertical jigging
Recommended for - perch, pike, zander, walleye,
trout, crapple

D - Dace

GYP - Gold Yellow Perch

GMO - Gold Metallic Orange

HP - Hot Perch

RR - Real Roach

RTS - Red Tail Shiner

YD - Yellow Dace

From its introduction in 2002, the Chubby Darter remains the only vertical wobbler in the world. Designed for ice fishing, it works vertically whether or not it's rising or falling. To achieve a proper control of the lure it's very important to use the correct tackle. A sensitive rod with that can be used as a strike indicator and the thinnest line available are the critical elements of the set-up. These allow you to use Chubby Darter features with maximum effectiveness and, quite simply, catch more fish! Offered in 3, 4, and 5 cm sizes.

Available version

How to fish it?

The Chubby Darter works well no matter how you raise and lower it but to stimulate the most predators we recommend lifts and drops of 60 cm. You should practise by observing the lure in clear, shallow water, or an aquarium, to find the optimum speed to get the best from the Chubby Darter; the lure should wobble strongly when both rising and falling. After each cycle you should pause, depending on the fish species and conditions, for between 2 and 10 seconds. Start fishing near the bottom and cover all depths back to the surface, shortening the line by 1 meter after each cycle. When the fish are not biting well we recommend adding an extra artificial (like a twister-tail) or natural (like an earthworm or small dead fish) baits on the belly treble, you could also replace the treble hook with a single. You can attach a bait hook on a short leader to the belly or rear hanger, this should be made of line a little thinner than the main line and be between 1 and 3 cm long. But it is often the case that simply adding a little artificial or natural attractor (like fish mucus or blood) will be enough to get wary fish to take the lure.

model	version	length (cm)	weight (g)	hooks	recommended mono / braided line (mm)	running depth (m)

ZIPPER

Lure type - vertical lure/crankbait

In the Salmo offer since - 2005

Available sizes - 4,5 cm 7,5 cm

Available version - sinking

Available colours - 5

Recommended method of fishing - casting, vertical jigging

Recommended for - walleye, zander, perch, bass, pike, ide

GMO - Gold Metallic Orange

GT - Green Tiger

GYP - Gold Yellow Perch

HP - Hot Perch

LRR - Luminescent Real Roach

It is yet another Salmo lure that was created in cooperation with American bass anglers. Salmo ZIPPER – a novelty among the lipless crankbaits, creates more noise and vibration than any other lure of such kind. Our Salmo designers created a lure that enables angler to exert a perfect control over the action and the depth of the retrieve; and that is both during low and high speed.

Available version

How to fish it?

Use ZIPPER in two ways: vertical jigging – under the ice or from the boat or by classic cast and retrieve method. In either case, keep in mind to avoid any slack in the line and utilize the possibilities of the lure's rattles. That is why usually you will achieve the best results with quick and aggressive retrieve. In stale waters, let the lure hit the bottom so that it will create small mud clouds and call in hungry fish from far away. In rivers pull ZIPPER across the current, but stop the retrieve every once in a while. ZIPPER can also be used for trolling. Just like with the majority of lures, its effectiveness will be increased when you add regular pulls with the rod tip.

Available version

Fatso is a typical pullbait- a hybrid of wobbler and jerkbait. Used in fresh water since the year 2000, it is responsible for countless caught trophies. It also proved its mettle during the first field tests in salt water. The model offered is 14cm long and is a sinking version. Extra strong body, split rings and treble hooks make it possible to challenge even the largest sea monster of any species.

How to fish it?

Fatso SX does not require any special skills. You can throw it very far and it is also very easy to fish. As a pullbait, it should be retrieved by a series of long, soft pulls. But even a steady retrieve is enough to generate action that drives sea predators mad. This lure is great both for casting and trolling under any speed.

SDR

This model is known from our freshwater offering for many years. But after being fitted with stronger split rings and corrosion resistant treble hooks, it turned out to be also perfect for saltwater game. In 2017 we will offer this lure in 14 cm size and a Super Deep Runner version.

How to fish it?

PERCH 14SDR SX is a lure designed for classic, ocean trolling. Its action is very strong and can be seen on the tip of the rod. We recommend a very stiff rod for this lure. With the boat speed of 4 – 6 knots and depending on the distance from the boat, this lure can dive up to 6 - 8m deep.

Salmo Slider is a legend on a world market of artificial lures. It became a part of a saltwater tribe in 2016 and right away earned many fans. Perfect aerodynamics and attractive action with all retrieve techniques make Slider SX a lethal weapon for fish of all sizes and in any geographic location. In the saltwater version it is offered in one 12cm size and sinking version only. Extra strong construction, saltwater split rings and treble hooks make this lure something to be recommended to any Big Game fans!

How to fish it?

SLIDER SX works perfectly both during a steady retrieve and during pauses. That is when it tempts fish by “shimmying” during a free fall. So cast it out as far as you can and fish it whatever way you like. Your Slider SX will call out from the depths the biggest sea monsters you have been dreaming about!

SWEEPER SX

Lure type - jerkbait
 In the Salmo offer since - 2016
 Available sizes - 14 and 17 cm
 Available version - sinking
 Available colours - 5
 Recommended method of fishing - casting, trolling
 Recommended for - giant trevally, barracuda, cubera snapper, spanish mackerel, jack crevalle

HBM - Holographic Blue Mackerel

HGM - Holographic Green Mackerel

HPM - Holographic Purple Mackerel

HMUL - Holographic Mullet

HSAR - Holographic Sardine

Available version

SWEEPER SX is a typical stickbait. Heavy weight, good aerodynamics and interesting action is what make it possible to use this lure in any conditions- cast it very far, even against the wind, and explore shallow reefs that are far away. SWEEPER SX is offered in two sizes – 14 and 17cm, sinking version. Extra strong construction, split rings and treble hooks is what make this lure ready for any sea monster out there.

How to fish it?

As a freshwater lure SWEEPER was designed for slow and finesse presentation. However in saltwater it is most effective during aggressive jerking or during a steady and very fast retrieve. SWEEPER SX glides to the sides even without the angler's intervention and during pauses it slowly falls down and gently wobbles, constantly teasing predators to strike.

model	version	length (cm)	weight (g)*	hooks*	recommended braided line (mm)	running depth spinning / trolling (m)

WARRIOR SX

Lure type - pullbait
 In the Salmo offer since - 2016
 Available sizes - 15 cm
 Available versions - sinking
 Available colours - 4
 Recommended method of fishing - casting, trolling
 Recommended for - giant trevally, barracuda, cubera snapper, spanish mackerel, jack crevalle

HGM - Holographic Green Mackerel

HH - Holographic Herring

HMUL - Holographic Mullet

HPM - Holographic Purple Mackerel

Available version

WARRIOR SX belongs to the pullbait family. Although its action is not aggressive, it has no problem in calling out huge predators from large depths. Because it creates almost zero resistance during the retrieve, you can cast it for hours without getting tired. WARRIOR SX is offered in sinking version and 15cm size. Like all saltwater Salmo lures, it is fitted with extra strong and corrosion resistant split rings and treble hooks.

How to fish it?

Excellent aerodynamics make WARRIOR SX excellent lure for fishing shallows and reefs that are deep anywhere from 0.5 to few meter deep. Fish it like any other pullbait with a series of long pulls while simultaneously reeling in the slack line. But oftentimes the most effective method is fast and steady retrieve mixed with few short pauses. WARRIOR SX is great both for casting and trolling with any speed.

WARRIOR CRANK SX

Lure type - pullbait
 In the Salmo offer since - 2016
 Available sizes - 15 cm
 Available versions - sinking
 Available colours - 4
 Recommended method of fishing - casting, trolling
 Recommended for - giant trevally, barracuda, cubera
 snapper, spanish mackerel, jack crevalle

HGM - Holographic Green Mackerel

HH - Holographic Herring

HMUL - Holographic Mullet

HPM - Holographic Purple Mackerel

Available version

This lure belongs to the twitchbait family. It is characterized by narrow and flashy action with regular side wobbles. WARRIOR CRANK SX can be thrown very far and despite the fact that it is sinking it can still be easily retrieved very shallow. It is 15cm long and is available only in sinking version. Excellent aerodynamics, extra strong construction and corrosion resistant treble hooks are things that make this lure a treat for any saltwater angler.

How to fish it?

WARRIOR CRANK SX can be fished in many ways. You can use a classical twitching - a series of short pulls and pauses or a fast and steady retrieve. Use either one of them depending on the conditions and the activity level of the fish. This lure is also excellent choice for trolling.
